SERVICES:

Design-Build

Sweetwater and the Design Team are performing the design and construction of approximately 140,000 square feet of additional space, along with 1,600 square feet of renovations to the existing cafeteria and kitchen. The majority of space in the new building will be used for the manufacturing of blood testing systems. The remaining space will house office functions, testing labs, and a GMP warehouse. The scope also includes site work to accommodate additional parking requirements, replacement of lost parking, and revised entrance to the site.

The project is designed and will be constructed to attain LEED Silver certification.
