Gensler
Boston, MA

SERVICES:

Preconstruction
Construction Management

Sweetwater performed this 111,000 square-foot re-stack on the first, second and third floors. The scope included updating the base building mechanical systems and interior renovations. Areas of renovation include a mostly open office setting (way of working), with some glass enclosed office and conferencing, huddle areas, server area, fitness, and cafeterias. Design features of specialty lighting and wall murals are positioned throughout the work space.

The highlight of the project is the 20,000 square-foot demonstration and training area which contains full-scale environments for consumer sectors such as fashion and grocery retail, hospitality, office & education, and the lighting products for each. The 90 varieties of lighting fixtures presented show how lighting affects selling, working and leisure.

The phased work, within an occupied building, was pre-planned and executed with high regard to employee comfort and job safety.
